## Abstract

The *Rheocricotopus (Psilocricotopus) chalybeatus* species group from China is reviewed. Three new species, *R. (P.) brochus* sp. n., *R. (P.) rotundus* sp. n. and *R. (P.) serratus* sp. n. are described as adult males. *R. (P.) imperfectus* Makarchenko & Makarchenko, 2005, *R. (P.) robacki* (Beck & Beck, 1964) and *R. (P.) valgus* Chaudhuri & Sinharay, 1983 are recorded from China for the first time and annotated. The diagnosis for the species group is emended and a key to adult males of the species group in China is presented.

## Keywords

Chironomidae, *Rheocricotopus*, *chalybeatus* species group, new species, key, China

## Introduction

The genus *Rheocricotopus* was erected by Thienemann and Harnisch (1932). Originally, Edwards (1929) treated it as a group of the genus *Spaniotoma* Philippi, 1865. Brundin (1956) reaffirmed the valid generic status of *Rheocricotopus* to be followed by Lehmann (1969) and other workers. It can be separated from other orthoclad genera by the following combination of characters: hairy eyes; without dorsomedial extension;

developed pulvilli; acrostichals beginning near antepronotum; plate-like superior volsella and pointed anal point with posterolaterally directed setae. The immature stages of *Rheocricotopus* can be collected in streams and rivers, rarely in the littoral zone of lakes (Cranston et al. 1989). So far, 70 species (Ashe and O'Connor 2012) were recorded in all zoogeographic regions in the world.

Sæther (1985) reviewed the genus *Rheocricotopus* Thienemann & Harnisch, 1932 in the world and divided the genus into two subgenera (*Rheocricotopus sensu stricto* and *Psilocricotopus* Sæther) including six species groups (*atripes* species group, *chalybeatus* species group, *godavarius* species group, *tuberculatus* species group, *fuscipes* species group and *effusus* species group). Wang and Sæther (2001) erected *orientalis*, a new species group. The *Rheocricotopus chalybeatus* species group can be distinguished from other species groups by the following combination of characters: gonostylus either with pronounced, preapical, triangular crista dorsalis or with apically sharp upward bend fused with apparent crista dorsalis; humeral pit moderately large, ovoid or circular, if large and somewhat rectangular gonostylus bent sharply upwards distally; superior volsella rounded, relatively small, never with projection. To date, 22 species were recorded in the *chalybeatus* species group (Sæther 1985; Caspers 1987; Chaudhuri and Sinharay 1983; Hazra and Chaudhuri 2004; Johannsen 1932; Makarchenko and Makarchenko 2005; Sasa 1990, 1991; Sasa and Suzuki 2000; Wang and Zheng 1989, 1991; Wang et al. 2004).

In China, 6 species of *chalybeatus* species group [*R. (P.) emeiensis* Wang & Zheng, 1989, *R. (P.) nigrus* Wang & Zheng, 1989, *R. (P.) bifasciatus* Wang & Zheng, 1991, *R. (P.) brachypus* Wang & Zheng, 1991, *R. (P.) chalybeatus* (Edwards, 1929) and *R. (P.) taiwanensis* Wang et al., 2004] had been recorded (Wang 2000, Wang et al. 2004).

Based on specimens from China, in this paper, three new species are described, and a key to the Chinese species of *chalybeatus* group is presented.

## Materials and methods

The morphological nomenclature follows Sæther (1980). The material examined was mounted on slides following the procedures outlined by Sæther (1969). The specimens examined in this study are deposited in the College of Life Sciences, Nankai University, China.

## Taxonomy

***Rheocricotopus (Psilocricotopus) bifasciatus* Wang & Zheng, 1991**  
[http://species-id.net/wiki/Rheocricotopus\\_bifasciatus](http://species-id.net/wiki/Rheocricotopus_bifasciatus)

*Rheocricotopus bifasciatus* Wang & Zheng, 1991: 100.

*Rheocricotopus (Psilocricotopus) bifasciatus* Wang, 2000: 639, Ashe and O'Connor 2012: 560.

**Specimens examined.** **Type material:** Holotype, ♂, Chongqing City, Jinfo Mountain, 29°01'90"N, 107°16'20"E, 9.v.1986, sweeping, Wang XH. Paratype (1): 1♂, as holotype.

**Additional material.** 1♂, Sichuan Province, Yajiang County, 30°15'00"N, 101°02'00"E, 14.vii.1997, sweeping, Wang XH; 1♂, Hunan Province, Taoyuan County, 28°63'72"N, 111°13'79"E, 17.vii.2004, sweeping, Yan CC; 3♂♂, Ningxia Hui Autonomous Region, Jingyuan County, 35°66'33"N, 106°29'08"E, 7.viii.1987, sweeping, Wang XH; 1♂, Ningxia Hui Autonomous Region, Jingyuan County, 35°66'33"N, 106°29'08"E, 8.viii.1987, sweeping, Wang XH; 1♂, Gansu Province, Yuzhong County, 35°90'00"N, 104°11'00"E, 4.viii.1993, sweeping, Bu WJ.

**Diagnosis.** This species can be separated from other members of the group by the following combination of characters: tergites I, II and IV pale brown, others dark brown; AR 0.90; wing anal lobe reduced; humeral pit large, ovoid; Costal extension 83 µm long.

**Remarks.** The additional specimens are similar to the description of Wang and Zheng (1991). The species is recorded from Palearctic Region for the first time.

**Distribution.** China (Chongqing Municipality, Sichuan, Hunan and Gansu Provinces, Ningxia Hui Autonomous Region).

### *Rheocricotopus (Psilocricotopus) brachypus* Wang & Zheng, 1991

[http://species-id.net/wiki/Rheocricotopus\\_brachypus](http://species-id.net/wiki/Rheocricotopus_brachypus)

*Rheocricotopus brachypus* Wang & Zheng, 1991: 101.

*Rheocricotopus (Psilocricotopus) brachypus* Wang, 2000: 639, Ashe and O'Connor 2012: 560.

**Specimens examined.** **Type material:** Holotype, ♂, Guangdong Province, Fengkai County, Heishiding National Nature Reserve, 23°30'02"N, 111°55'01"E, 12.iv.1985, sweeping, Wang XH.

**Additional material.** 1♂, Hubei Province, Hefeng County, 29°91'00"N, 110°03'00"E, 16.vii.1999, light trap, Ji BC; 1♂, Sichuan Province, Yajiang County, 30°15'00"N, 101°02'00"E, 14.vii.1997, sweeping, Wang XH; 1♂, Xizang Autonomous Region, Bayi County, Shergmla Mountain, 29°64'07"N, 94°36'01"E, 28–30. ix.1997, yellow trap, Solhøy T & Skartveit J.

**Diagnosis.** This species can be separated from other members of the group by the following combination of characters: AR 0.43; anal lobe developed; anal point robust.

**Remarks.** Wang and Zheng (1991) described this species without humeral pit which as diagnostic characteristic. However, after examining the holotype, we find a medium, relatively shallow, ovoid humeral pit existing.

**Distribution.** Oriental China (Guangdong, Hubei and Sichuan Provinces, Xizang Autonomous Region).

***Rheocricotopus (Psilocricotopus) brochus* sp. n.**

<http://zoobank.org/74D7F9E8-E9E8-4BE0-A21B-DDEB23C88D8B>

[http://species-id.net/wiki/Rheocricotopus\\_brochus](http://species-id.net/wiki/Rheocricotopus_brochus)

Figs 1–6

**Diagnosis.** The adult male can be distinguished from known species of the species group and the genus by the following combination of characters: crista dorsalis tooth-like; tergites I, II and IV yellow, tergite III mainly yellow with a brown circular area, other tergites brown.

**Description.** Male imago (n = 12)

Total length 1.75–2.70, 2.18 mm. Wing length 1.25–1.60, 1.33 mm. Total length/wing length 1.35–1.78, 1.68. Wing length/length of profemur 1.76–2.31, 2.04.

**Coloration.** Head and thorax brown. Tergites (Fig. 1) I, II and IV yellow, tergite III mainly yellow but having a brown circular area, other tergites brown.

**Head.** AR 0.63–0.89, 0.72. Ultimate flagellomere 245–360, 284 µm long. Temporal setae 4–7, 5, including 1–3, 2 inner verticals; 1–3, 2 outer verticals and 0–2, 1 postorbital. Clypeus with 7–10, 8 setae. Cibarial pump, tentorium and stipes as in Fig. 2. Tentorium 75–140, 123 µm long, 13–25, 19 µm wide. Stipes 100–125, 118 µm long, 8–10, 8 µm wide. Palpomere lengths (in µm): 20–25, 23; 38–55, 47; 90–130, 105; 110–138, 120; 205–250, 232. L: 5<sup>th</sup>/3<sup>rd</sup> 1.92–2.67, 2.23. Third palpal segment with 2 sensilla clavata.

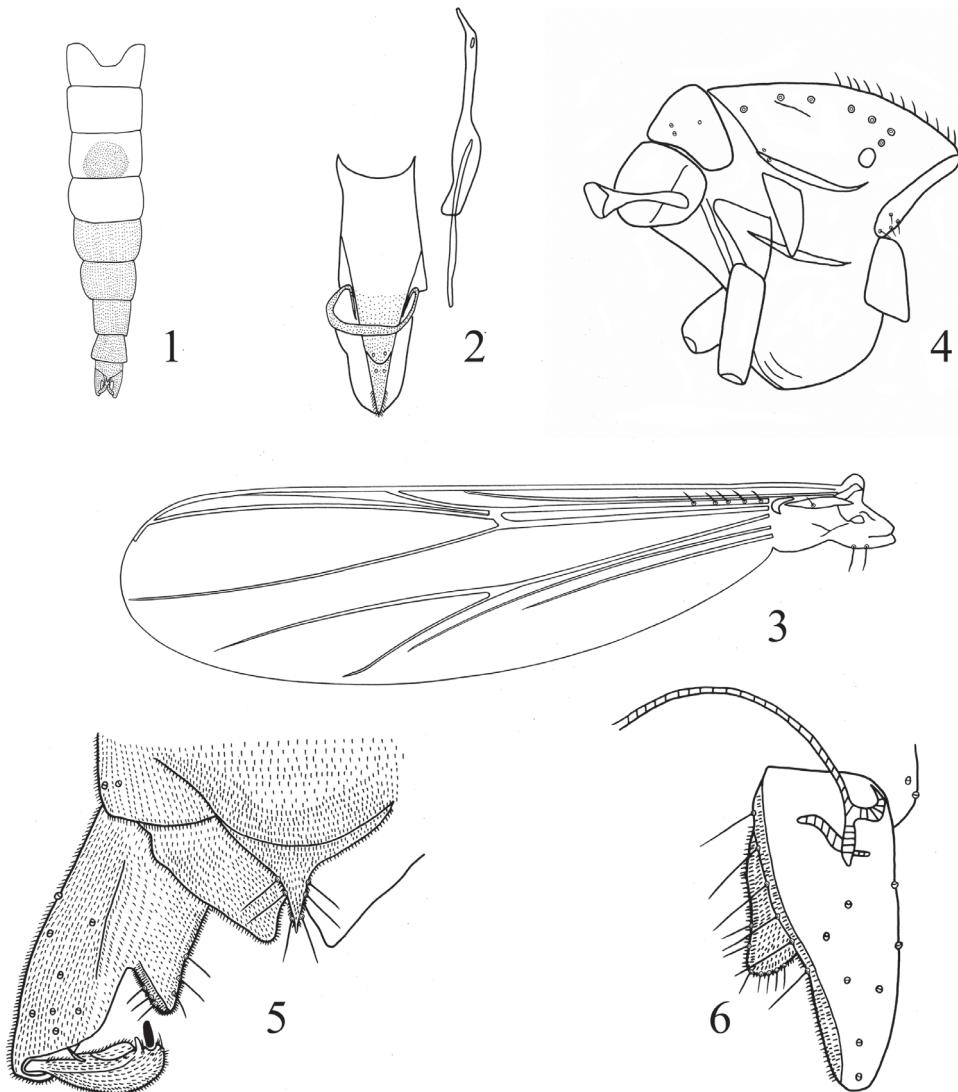

**Wing** (Fig. 3). Anal lobe reduced. VR 1.06–1.13, 1.07. Costal extension 45–65, 51 µm long. Brachiolum with 1 seta. R with 3–6, 5 setae. Remaining veins bare. Squama with 1–2, 2 setae.

**Thorax** (Fig. 4). Antepronotum with 2–4, 4 lateral setae. Dorsocentrals 5–7, 6; acrostichals 9–13, 11; prealars 2–3, 3. Scutellum with 2–4, 4 setae. Humeral pit moderately large, ovoid.

**Legs.** Spur of fore tibia 23–40, 35 µm long; spurs of mid tibia 13–25, 15 µm and 10–18, 12 µm long; spurs of hind tibia 38–50, 41 µm and 10–20, 15 µm long. Hind tibial comb with 9–12, 10 spines, 20–48, 31 µm long. Width at apex of fore tibia

**Table 1.** Lengths (in µm) and proportions of legs of *R. (P.) brochus* sp. n.

Laterosernite IX with 1–3, 2 setae. Phallapodeme 35–68, 55  $\mu\text{m}$  long. Transverse sternapodeme 35–88, 59  $\mu\text{m}$  long. Gonocoxite 138–191, 157  $\mu\text{m}$  long. Superior volsella triangular, 20–40, 31  $\mu\text{m}$  long, with 5–8, 7 setae. Gonostylus 60–75, 66  $\mu\text{m}$  long. Megaseta 9–13, 11  $\mu\text{m}$  long. Crista dorsalis tooth-shaped. HR 2.11–2.60, 2.38. HV 2.59–3.60, 3.31.

**Table 2.** Main differences between *R. (P.) brochus* sp. n., *R. (P.) bifasciatus* and *R. (P.) insularis*.

	<i>R. (P.) brochus</i> sp. n.	<i>R. (P.) bifasciatus</i>	<i>R. (P.) insularis</i>
AR	0.63–0.89, 0.72	0.90	0.71–0.74
Length of costal extension	45–65, 51 µm	83 µm	96 µm
Squama	1–2, 2 setae	2 setae	8 setae
Shape of humeral pit	medium, ovoid	large, rounded	ovoid
Tergite coloration	TI, II, IV yellow, TIII with a brown circular area, others brown	TI, II, IV yellow, others brown	all tergites brown

**Type material.** Holotype: ♂ (BDN. C11A32), China, Zhejiang Province, Yueqing City, Lingdi County, Jiulong Village, 28°31'00"N, 120°96'00"E, 18.iv.2011, sweeping, Lin XL. Paratypes (11): 4♂♂, as holotype; 6♂♂, Hubei Province, He-feng County, 29°91'00"N, 110°03'00"E, 16.vii.1999, light trap, Ji BC; 1♂, Jiangxi Province, Wuyi Mountain National Nature Reserve, 27°48'11"N, 117°39'30"E, 13.vi.2004, light trap, Yan CC.

**Etymology.** The specific name is an adjective, from Latin *brochus*, meaning tooth, referring to tooth-shaped crista dorsalis.

**Remarks.** The new species resembles *R. (P.) bifasciatus* Wang & Zheng, 1991 and *R. (P.) insularis* Makarchenko & Makarchenko, 2005 in the following combination of characters: anal point long, pointed distally; wing anal lobe reduced; crista dorsalis tooth-shaped. But the new species can be separated from the latter species in the basis following combination of characters in Table 2.

Female and immature stages unknown.

### *Rheocricotopus (Psilocricotopus) chalybeatus* (Edwards, 1929)

[http://species-id.net/wiki/Rheocricotopus\\_chalybeatus](http://species-id.net/wiki/Rheocricotopus_chalybeatus)

*Spaniotoma chalybeatus* Edwards, 1929: 331.

*Eukiefferiella urbanus* Goetghebuer, 1932: 101.

*Trichocladius lerutbi* Goetghebuer, 1939: 2.

*Rheocricotopus chalybeatus* Lehmann, 1969: 354; Hirvenoja 1973: 340; Langton 1984: 98.

*Rheocricotopus (Psilocricotopus) chalybeatus* Sæther, 1985: 82; Wang 2000: 639, Ashe and O'Connor 2012: 561.

**Specimens examined.** 2♂♂, Liaoning Province, Dandong City, Fengcheng City, Cao River, 40°62'50"N, 124°06'96"E, 1.iv.1993, sweeping, Wang JC; 4♂♂, Gansu Province, Longnan City, Gankang County, 33°33'10"N, 105°90'31"E, 2.viii.1982, sweeping, Bu WJ; 1♂, Shandong Province, Zaozhuang City, Shanting District, Beizhuang Town, 34°99'20"N, 102°52'32"E, 28.v.1994, sweeping, Wang XH; 1♂, Shandong Province, Yantai City, Muping District, 37°38'62"N, 121°59'57"E, 28.viii.1988, sweeping, Li HY; 1♂, Shaanxi Province, Baoji City, Feng County, Tsinling Moun-

tains, 34°23'44"N, 106°90'01"E, 27.vii.1994, sweeping, Ji BC; 3♂♂, Zhejiang Province, Wenzhou City, Yueqing City, Furong Town, 33°64'03"N, 121°02'73"E, 2.viii.2010, light trap, Lin XL.

**Diagnosis.** This species can be separated from its congeners by the following combination of characters: AR 0.89–1.15; R with 2–4 setae; squama with 8–14 setae; Costa not produced or scarcely produced.

**Remarks.** The additional specimens mainly agree with the description of Lehmann and other workers. But costal extension of specimens from Oriental Region (35–40 µm long) longer than from Palearctic Region (0–15 µm long).

**Distribution.** China (Liaoning, Gansu, Shandong, Shaanxi and Zhejiang Provinces), Algeria, Balearic Islands, Belarus, Belgium, Corsica, Czech Republic, Denmark, Finland, France, Germany, Great Britain, Hungary, Ireland, Italy, Japan, Lebanon, Luxembourg, Mongolia, Morocco, Netherlands, Poland, Portugal, Romania, Russia, Slovakia, Spain, Switzerland, Syria, Tunisia, Turkey, Ukraine.

#### *Rheocricotopus (Psilocricotopus) emeiensis Wang & Zheng, 1989*

[http://species-id.net/wiki/Rheocricotopus\\_emeiensis](http://species-id.net/wiki/Rheocricotopus_emeiensis)

*Rheocricotopus emeiensis* Wang & Zheng, 1989: 311.

*Rheocricotopus (Psilocricotopus) emeiensis* Wang, 2000: 639, Ashe and O'Connor 2012: 563.

**Specimens examined. Type material:** Holotype, ♂, Sichuan Province, Leshan City, Emei Mountain, 29°58'18"N, 103°29'15"E, 17.v.1986, sweeping, Wang XH.

**Additional material.** 1♂, Xinjiang Uygur Autonomous Region, Haba County, 48°17'00"N, 86°42'00"E, 15.vii.2002, sweeping, Tang HQ; 2♂♂, Shaanxi Province, Hanzhong City, Liuba County, Xiaoliuba Village, 33°64'03"N, 106°90'31"E, 4.viii.1994, sweeping, Ji BC; 2♂♂, Shaanxi Province, Xi'an City, Zhouzhi County, Banfangzi, 33°81'84"N, 107°99'64"E, 7.viii.1994, light trap, Ji BC; 2♂♂, Shaanxi Province, Xi'an City, Zhouzhi County, Banfangzi, 33°81'84"N, 107°99'64"E, 10.viii.1994, light trap, Ji BC; 1♂, Yunnan Province, Kunming City, Fumin County, 25°22'61"N, 102°52'32"E, 1.vi.1996, sweeping, Wang XH; 1♂, Yunnan Province, Kunming City, Yiliang County, 24°92'24"N, 103°13'95"E, 2.vi.1996, sweeping, Wang XH; 1♂, Fujian Province, Xiamen City, 24°48'24"N, 118°08'44"E, 15.v.1993, sweeping, Bu WJ; 1♂, Guizhou Province, Guiyang City, 26°60'17"N, 106°70'36"E, 10.vii.1995, light trap, Bu WJ; 1♂, Guizhou Province, Guiyang City, Huaxi District, 26°41'34"N, 106°66'66"E, 23.vii.1995, sweeping, Bu WJ.

**Diagnosis.** This species can be separated from other members of the group by the following combination of characters: R bare; anal point short, pointed distally.

**Remarks.** The additional specimens are similar to the description of Wang and Zheng (1989). The species is recorded from Palearctic Region for the first time.

**Distribution.** China (Fujian, Guizhou, Sichuan, Shaanxi and Yunnan Provinces, Xinjiang Uygur Autonomous Region).

***Rheocricotopus (Psilocricotopus) imperfectus* Makarchenko & Makarchenko, 2005**  
[http://species-id.net/wiki/Rheocricotopus\\_imperfectus](http://species-id.net/wiki/Rheocricotopus_imperfectus)

*Rheocricotopus (Psilocricotopus) imperfectus* Makarchenko & Makarchenko, 2005: 126;  
 Makarchenko and Makarchenko 2011: 120, Ashe and O'Connor 2012: 564.

**Specimens examined.** 1♂, Hubei Province, Shennongjia Forest Region, 31°74'56"N, 110°67'53"E, 19.vii.1997, sweeping, Du YZ; 1♂, Hubei Province, Lichuan City, 30°29'37"N, 108°93'20"E, 30.vii.1999, sweeping, Ji BC; 12♂♂, Shaanxi, Baoji City, Feng County, Tsinling Mountains, 34°23'44"N, 106°90'01"E, 28–30.vii.1994, sweeping, Bu WJ; 1♂, Shaanxi, Ankang City, Ningshan County, Huoditang Town, 33°43'38"N, 108°44'81"E, 12.viii.1994, sweeping, Bu WJ; 1♂, Shaanxi, Ankang City, Ningshan County, Xunyangba Town, 33°54'82"N, 108°54'77"E, 17.viii.1994, sweeping, Bu WJ; 10♂♂, Ningxia Hui Autonomous Region, Guyuan City, Jingyuan County, Liupan Mountain, 35°78'97"N, 106°28'93"E, 6–7.viii.1987, sweeping, Wang XH.

**Diagnosis.** This species can be separated from other members of the group by the following combination of characters: AR 0.47; humeral pit large and rounded; acrostichal absent; anal point of hypopygium sharply triangular, with 10 setae along the edges; gonostylus slightly curved, with roundish triangular crista dorsalis.

**Remarks.** Chinese specimens mainly agree with the description of Makarchenko and Makarchenko (2005), but Chinese specimens with more setae in R (4–8) than the specimens in Russia (R with 3 setae).

**Distribution.** China (Hubei and Shaanxi Provinces, Ningxia Hui Autonomous Region), Russia (Far East).

***Rheocricotopus (Psilocricotopus) nigrus* Wang & Zheng, 1989**  
[http://species-id.net/wiki/Rheocricotopus\\_nigrus](http://species-id.net/wiki/Rheocricotopus_nigrus)

*Rheocricotopus nigrus* Wang & Zheng, 1989: 311.

*Rheocricotopus (Psilocricotopus) nigrus* Wang, 2000: 639; Makarchenko and Makarchenko 2011: 120, Ashe and O'Connor 2012: 566.

**Specimens examined. Type material:** Holotype, ♂, Hubei Province, Xiangyang City, Gucheng County, 32°29'00"N, 111°64'00"E, 5.v.1986, sweeping, Wang XH; Paratype (1): 1♂, as holotype.

**Additional material.** 2♂♂, Zhejiang Province, Baishanzu National Nature Reserve, 27°73'23"N, 119°19'06"E, 18.iv.1995, sweeping, Ji BC; 11♂♂, Xinjiang Uygur Autonomous Region, Mongolian Autonomous Prefecture of Bayingolin, Kuerleying Town, 41°74'10"N, 86°10'82"E, 26.viii.2002, light trap, Tang HQ; 1♂, Xinjiang Uygur Autonomous Region, Mongolian Autonomous Prefecture of Bayingolin, Yuli County, 41°57'00"N, 86°30'00"E, 25.v.2002, sweeping, Tang HQ; 1♂, Xinjiang Uygur Autonomous Region, Haba County, 48°17'00"N,

86°42'00"E, 15.vii.2002, sweeping, Tang HQ; 1♂, Fujian Province, Nanping City, Mangdang Mountain, 26°69'52"N, 118°12'55"E, 22.ix.2002, sweeping, Liu Z; 1♂, Fujian Province, Nanping City, Mangdang Mountain, 26°69'52"N, 118°12'55"E, 23.ix.2002, sweeping, Liu Z.

**Diagnosis.** The adult male can be separated from other members of the group by the following combination of characters: body totally dark brown; AR 1.30; dorsocentrals 20; humeral pit large, similar to the square.

**Remarks.** The species distributed in both Oriental and Palearctic Region. The specimens from Palearctic Region have fewer dorsocentrals (13–17) than those from Oriental Region (20).

**Distribution.** China (Hubei, Zhejiang and Fujian Provinces, Xinjiang Uygur Autonomous Region), Russia (Far East).

#### *Rheocricotopus* (*Psilocricotopus*) *robacci* (Beck & Beck, 1964)

[http://species-id.net/wiki/Rheocricotopus\\_robacci](http://species-id.net/wiki/Rheocricotopus_robacci)

*Tricocladius robacci* Beck & Beck, 1964: 204.

*Rheocricotopus kenorensis* Sæther, 1969: 88.

*Rheocricotopus* (*Psilocricotopus*) *robacci* Sæther, 1985: 79, Ashe and O'Connor 2012: 567.

**Specimens examined.** 1♂, Shaanxi Province, Xi'an City, Zhouzhi County, Banfangzi, 33°81'84"N, 107°99'64"E, 10.viii.1994, light trap, Ji BC; 8♂♂, Jiangxi Province, Yichun City, Yifeng County, 28°39'69"N, 114°67'55"E, sweeping, Yan CC; 1♂, Fujian Province, Longyan City, Shanghang County, 25°05'21"N, 116°41'52"E, 6.v.1993, sweeping, Wang XH; 2♂♂, Xinjiang Uygur Autonomous Region, Boertala Mongol Autonomous Prefecture, Sailimu lake, 44°62'32"N, 81°20'48"E, 30.vii.2002, sweeping, Tang HQ; 7♂♂, Guizhou Province, Zunhua City, Daozhen County, Dasha River, 28°86'58"N, 107°60'73"E, 25.v.2004, light trap, Tang HQ; 2♂♂, Guizhou Province, Zunhua City, Daozhen County, Dasha River, 28°86'58"N, 107°60'73"E, 24.viii.2004, sweeping, Yu X; 3♂♂, Yunnan Province, Dali Bai Autonomous Prefecture, Eryuan County, Niujie Town, 26°25'55"N, 99°98'90"E, light trap, Wang BX; 1♂, Tibet, Xigaze, Nielamu County, 27°98'73"N, 85°98'32"E, 15.8.1987, light trap, Deng CY; 1♂, Tibet, Xigaze, Nielamu County, 27°98'73"N, 85°98'32"E, 21.9.1987, light trap, Deng CY.

**Diagnosis.** The species is characterized by having a relatively high AR (1.14–1.24), very weak and short acrostichals, 8–14 dorsocentrals, reduced number of bristles on squama, anal tergite extending beyond tip of anal point, superior volsella triangular, crista dorsalis triangular, apex pointed.

**Remarks.** Chinese specimens mainly agree with the description of Sæther (1969, 1985). It is recorded in Palearctic Region for the first time. Chinese specimens have lower body length (2.55–3.13 mm) and lower AR 1.07 than species from Nearctic Region (total length 3.10–3.30 mm, AR 1.18).

**Distribution.** China (Fujian, Guizhou, Jiangxi, Shaanxi and Yunnan Provinces, Xinjiang Uygur Autonomous Region, Tibet), Canada, U.S.A.

***Rheocricotopus (Psilocricotopus) rotundus* sp. n.**

<http://zoobank.org/5796E5A3-6914-462C-97E2-9CE1709E522E>

[http://species-id.net/wiki/Rheocricotopus\\_rotundus](http://species-id.net/wiki/Rheocricotopus_rotundus)

Figs 7–11

**Diagnosis.** The adult male of the new species can be distinguished from known species of the genus by the following combination of characters: low AR 0.25–0.29; superior volsella rounded.

**Description.** Male (n = 2).

Total length 1.58–1.98 mm. Wing length 0.86–1.20 mm. Total length/wing length 1.66–1.84. Wing length/length of profemur 1.74–2.61.

*Coloration.* Head and abdomen yellow brown, thorax without distinct pattern.

*Head.* Antenna as in Fig. 7. AR 0.25–0.29. Ultimate flagellomere 88–118 µm long. Temporal setae 3–4, including 1–2 inner verticals and 2 outer verticals. Clypeus with 6–12 setae. Tentorium 115–130 µm long, 23–25 µm wide. Stipes 115–118 µm long, 4–5 µm wide. Palpomere lengths (in µm): 48–53, 30–45, 48–60, 68–90, 123–163. L: 5<sup>th</sup>/3<sup>rd</sup> 2.56–2.71.

*Wing* (Fig. 8). Anal lobe normally developed. VR 1.17–1.19. Costal extension 30–38 µm long. Brachiolum with 1 seta. R with 1–3 setae. Remaining veins bare. Squama with 2 setae.

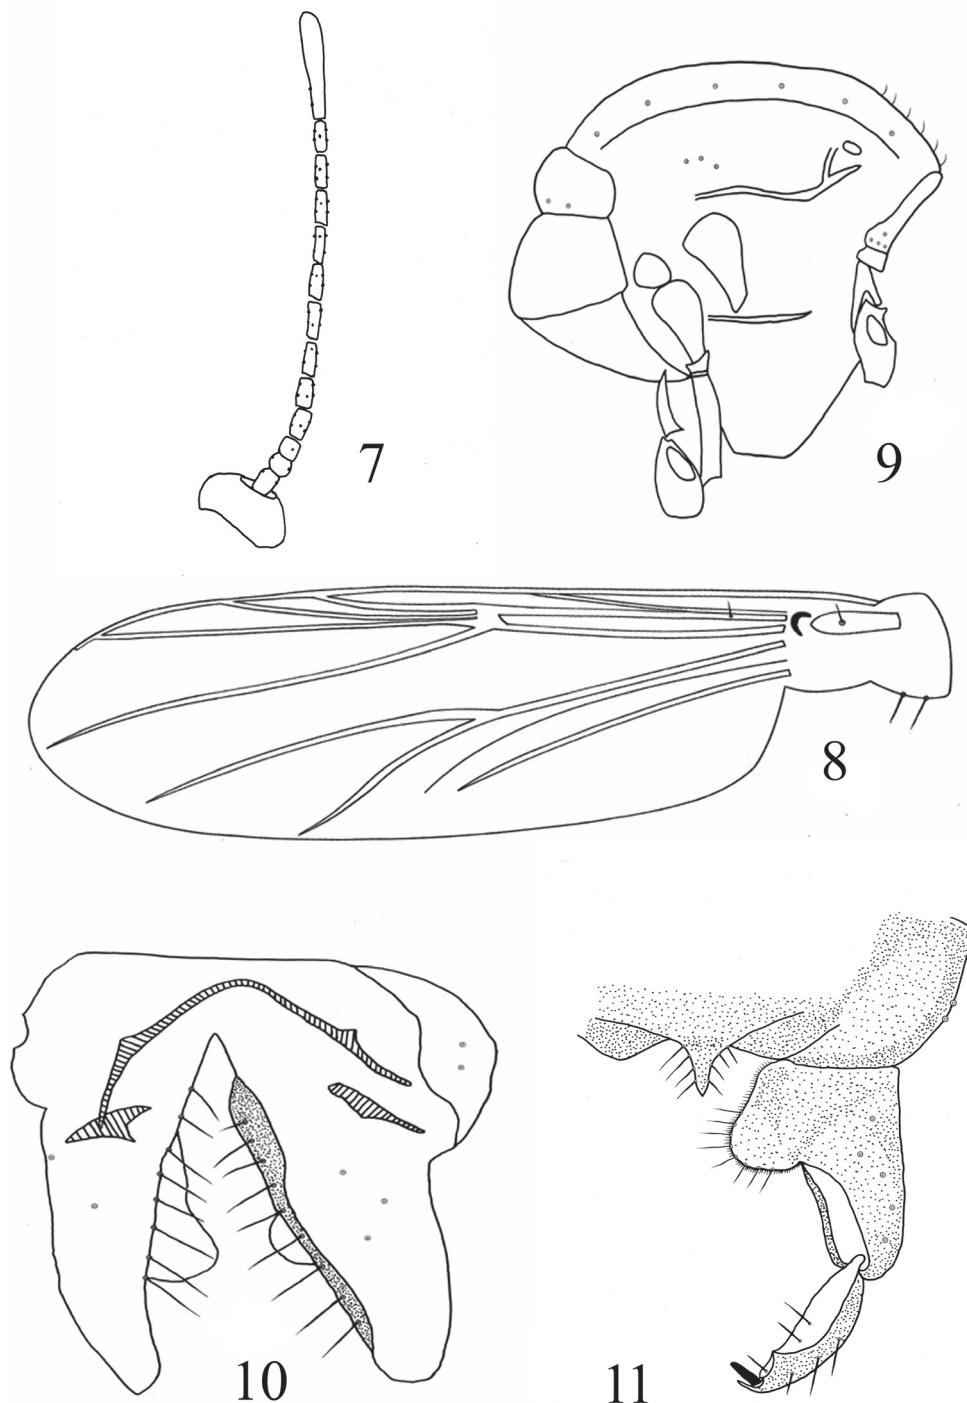

*Thorax* (Fig. 9). Antepronotum with 4 lateral setae. Dorsocentrals 6–11; acrostichals 6–8, prealars 3. Scutellum with 2–6 setae. Humeral pit moderately large, ovoid.

*Legs.* Spur of fore tibia 23–40 µm long; spurs of mid tibia 13–18 µm long and 12–15 µm long; spurs of hind tibia 27–38 µm and 13–15 µm long. Hind tibial comb with 8–16 spines, 13–27 µm long. Width at apex of fore tibia 25–40 mm, of mid tibia 25–38 mm, of hind tibia 23–40 mm. Lengths and proportions of legs as in Table 3.

*Hypopygium* (Figs 10–11). Anal point triangular, 20–28 µm long, with 4 lateral setae each side. Laterosernite IX with 2 setae. Phallapodeme 48–50 µm long. Transverse

**Table 3.** Lengths (in µm) and proportions of legs of *R. (P.) rotundus* sp. n.

**Figures 7–11.** *Rheocricotopus (Psilocricotopus) rotundus* sp. n., male. 7 antenna 8 wing 9 thorax 10 hypopygium (ventral view) 11 hypopygium (dorsal view).

sternapodeme arcuate with normally oral projection, 33–40  $\mu\text{m}$  long. Gonocoxite 125–135  $\mu\text{m}$  long. Superior volsella rounded, plate-shaped and sclerotized, 28–38  $\mu\text{m}$  long and 20–27  $\mu\text{m}$  wide, covered with 8 short setae and a few microtrichia. Gonostylus 55–70  $\mu\text{m}$  long, with distinct, triangular crista dorsalis. Megaseta 8–10  $\mu\text{m}$  long. HR 1.93–2.27. HV 2.82–2.87.

**Type material.** Holotype: ♂ (BDN. G5A42), China, Zhejiang Province, Jinhua City, Pan'an County, Dapanshan National Nature Reserve, 28°98'02"N, 120°52'63"E, 18.vii.2012, sweeping, Lin XL. Paratype (1): 1♂, Yunnan Province, Dali Bai Autonomous Prefecture, Eryuan County, Niujie Town, 26°25'55"N, 99°98'90"E, sweeping, Wang BX.

**Etymology.** The specific name is an adjective, from Latin *rotundus*, meaning rounded, referring to rounded superior volsella.

**Remarks.** The new species resembles *R. (P.) notabilis* Caspers, 1987 in the following combination of characters: low AR; humeral pit medium, ovoid; the shape of anal point. But the new species can be separated from latter species on the basis of following characters: (1) costal extension of the new species (30–38  $\mu\text{m}$ ) much shorter than *R. (P.) notabilis* Caspers (72  $\mu\text{m}$ ); (2) anal lobe of the new species developed, which reduced in *R. (P.) notabilis* Caspers; and (3) crista dorsalis of the new species distinct, triangular subapical, which pronounced, rounded in *R. (P.) notabilis* Caspers.

Female and immature stages unknown.

### *Rheocricotopus (Psilocricotopus) serratus* sp. n.

<http://zoobank.org/D6FD7A2F-87EB-4513-A6D4-F122B14548DA>

[http://species-id.net/wiki/Rheocricotopus\\_serratus](http://species-id.net/wiki/Rheocricotopus_serratus)

Figs 12–15

**Diagnosis.** The adult male of the new species can be distinguished from known species of the species group and the genus by the following combination of characters: crista dorsalis sawtooth-shaped, hyaline, high as megaseta; high HR (2.61–3.42) and HV (3.40–5.00).

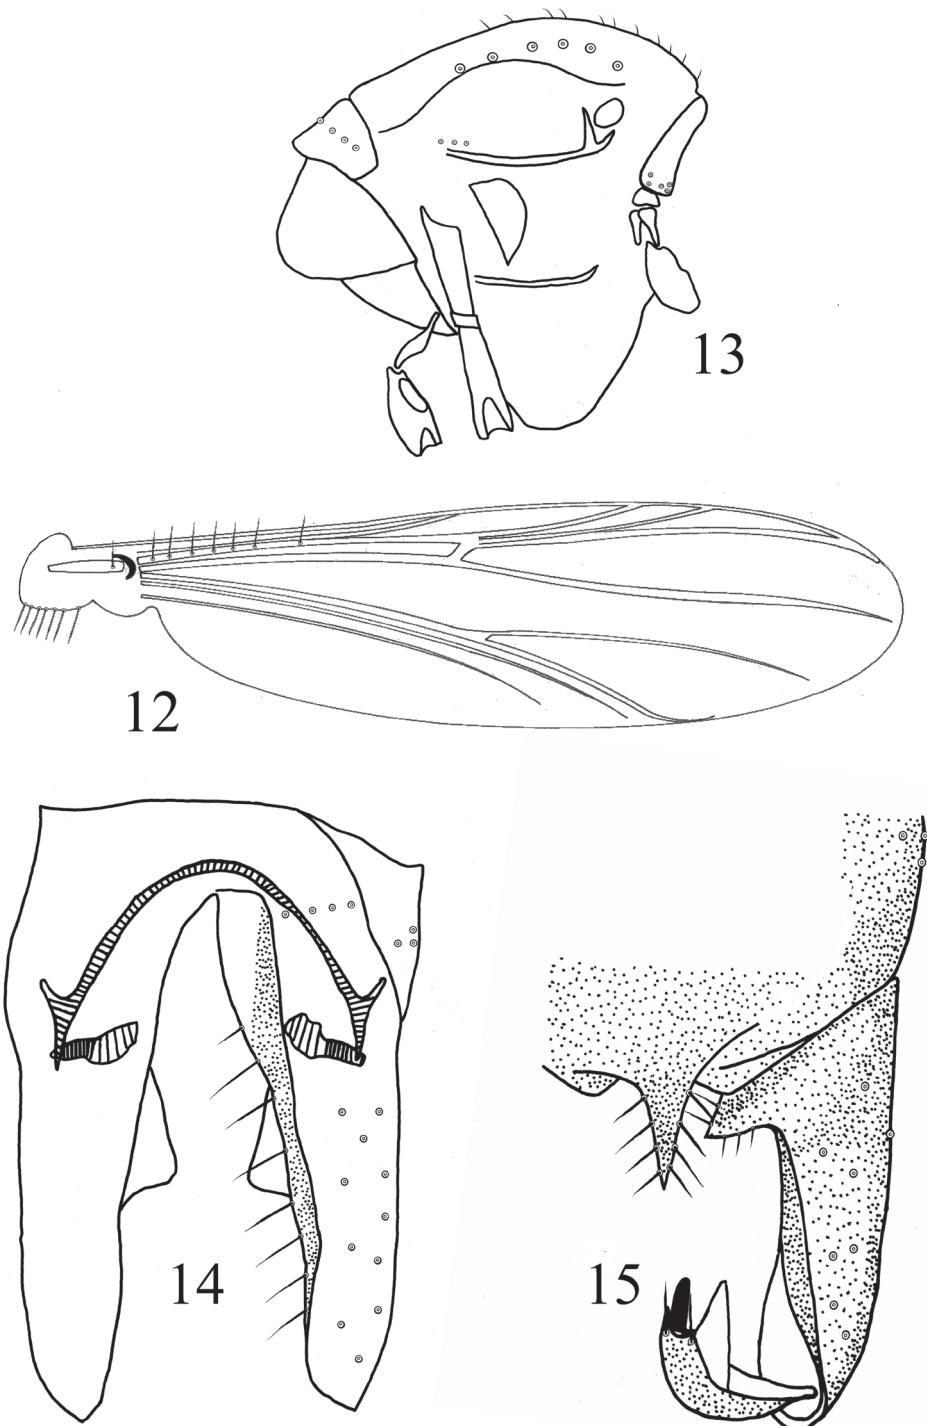

### Description. Male imago (n = 4)

Total length 2.55–3.00, 2.73 mm. Wing length 1.33–1.95, 1.69 mm. Total length/wing length 1.44–1.94, 1.64. Wing length/length of profemur 2.21–2.35, 2.27.

**Coloration.** Head and abdomen yellow, thorax dark brown.

**Head.** AR 0.71–0.78, 0.74. Ultimate flagellomere 285–355, 323  $\mu\text{m}$  long. Temporal setae 0–3, 1, including 0–1, 1 inner vertical; 0–2, 1 outer vertical and 0–1, 1 postorbital. Clypeus with 9–12, 10 setae. Tentorium 140–153, 148  $\mu\text{m}$  long, 33–40, 38  $\mu\text{m}$  wide. Stipes 65–75, 68  $\mu\text{m}$  long, 3–7, 4  $\mu\text{m}$  wide. Palpomere lengths (in  $\mu\text{m}$ ): 35–70, 47; 48–58, 53; 103–123, 114; 118–155, 141; 205–238, 219. L: 5<sup>th</sup>/3<sup>rd</sup> 1.67–2.02, 1.92.

**Wing** (Fig. 12). Anal lobe slightly developed. VR 1.13–1.20, 1.17. Costal extension 50–88, 71  $\mu\text{m}$  long. Brachiolum with 1 seta. R with 4–11, 7 setae. Remaining veins bare. Squama with 6–13, 9 setae.

BR	1.75–2.11, 1.91	2.10–2.22, 2.19	2.40–3.55, 2.99

*Thorax* (Fig. 13). Antepronotum with 1–7, 4 lateral setae. Dorsocentrals 6–9, 7; acrostichals 9–15, 12; prealars 3. Scutellum with 4–6, 5 setae. Humeral pit moderately large, egg-shaped.

*Legs.* Spur of fore tibia 40–48, 44  $\mu\text{m}$  long; spurs of mid tibia 15–25, 19  $\mu\text{m}$  and 15–20, 17  $\mu\text{m}$  long; spurs of hind tibia 43–55, 48  $\mu\text{m}$  and 18–23, 19  $\mu\text{m}$  long. Hind tibial comb with 11–13, 12 spines, 30–50, 40  $\mu\text{m}$  long. Width at apex of fore tibia 35–45, 41 mm, of mid tibia 36–45, 41 mm, of hind tibia 38–45, 43 mm. Lengths (in  $\mu\text{m}$ ) and proportions of legs as in Table 4.

*Hypopygium* (Figs 14–15). Anal point triangular, pointed distally, 33–50, 41  $\mu\text{m}$  long, 20–30, 24  $\mu\text{m}$  wide, with 4–5, 5 lateral setae each side. Laterosernite IX with 2–3, 3 setae. Phallapodeme 23–28, 25  $\mu\text{m}$  long. Transverse sternapodeme 18–33, 26  $\mu\text{m}$  long. Gonocoxite 180–205, 195  $\mu\text{m}$  long. Superior volsella triangular, 35–43, 40  $\mu\text{m}$  long, with 7–8, 8 setae. Gonostylus 60–75, 67  $\mu\text{m}$  long. Megaseta 13–15, 14  $\mu\text{m}$  long. Crista dorsalis sawtooth-shaped, hyaline, high as megaseta. HR 2.61–3.42, 2.91. HV 3.40–5.00, 4.09.

**Type material.** Holotype: ♂ (BDN. 10058), China, Yunnan Province, Dali Bai Autonomous Prefecture, Eryuan County, Niujie Town, 26°25'55"N, 99°98'90"E, light trap, Zhou CF. Paratypes (3): 1♂, Zhejiang Province, Qingyuan County, Baishanzu National Nature Reserve, 27°73'23"N, 119°19'06"E, 15.vii.1994, Ji BC; 1♂, Tibet, Xigaze, Nielamu County, 27°98'73"N, 85°98'32"E, 21.9.1987, light trap, Deng CY; 1♂, Sichuan Province, Xiangcheng County, 28°93'44"N, 99°79'72"E, 12.vi.1996, light trap, Wang XH.

**Etymology.** The specific name is an adjective, from Latin *serratus*, meaning sawtooth, referring to the sawtooth-shaped crista dorsalis.

**Remarks.** The new species resembles *R. (P.) himalayensis* Chaudhuri & Sinharay, 1983 in the triangular anal point, but it can be separated from the latter species on the basis of following characters: (1) costal extension of the new species much longer (50–88  $\mu\text{m}$ ), than *R. (P.) himalayensis* Chaudhuri & Sinharay (25  $\mu\text{m}$ ); (2) humeral

pit in the new species medium, ovoid, which rounded in the latter species; (3) crista dorsalis sawtooth-shaped, hyaline in the new species, which moderately pronounced in the latter species.

Female and immature stages unknown.

***Rheocricotopus (Psilocricotopus) taiwanensis* Wang, Yan & Maa, 2004**

[http://species-id.net/wiki/Rheocricotopus\\_taiwanensis](http://species-id.net/wiki/Rheocricotopus_taiwanensis)

*Rheocricotopus (Psilocricotopus) taiwanensis* Wang, Yan & Maa, 2004: 239, Ashe and O'Connor 2012: 567.

**Specimens examined. Type material:** Holotype, ♂, Taiwan Province, Taipei City, Guandu, Wetland, 25°11'56"N, 121°47'14"E, 20.x.1988, sweeping, Maa CJ.

**Diagnosis.** The adult male can be separated from other members of the group by the following combination of characters: all veins of wing bare; low AR (0.71); squama with 3 setae; very pronounced crista dorsalis.

**Distribution.** China (Taiwan Province).

***Rheocricotopus (Psilocricotopus) valgus* Chaudhuri & Sinharay, 1983**

[http://species-id.net/wiki/Rheocricotopus\\_valgus](http://species-id.net/wiki/Rheocricotopus_valgus)

*Rheocricotopus valgus* Chaudhuri & Sinharay, 1983: 402.

*Rheocricotopus (Psilocricotopus) valgus* Ashe & O'Connor, 2012: 568.

**Specimens examined.** 1♂, Guangdong Province, Fengkai County, Heishiding, 23°30'02"N, 111°55'01"E, 20.iv.1988, sweeping, Wang XH; 1♂, Guangxi Province, Longsheng County, 25°89'26"N, 110°21'21"E, 16.v.1990, sweeping, Wang XH; 1♂, Guangxi Province, Jinxiu County, 24°14'00"N, 110°19'00"E, 1.vi.1990, light trap, Wang XH; 2♂♂, Hubei Province, Hefeng County, 29°91'00"N, 110°03'00"E, 16.vii.1999, light trap, Ji BC; 1♂, Hubei Province, Xianfeng Mountain, 29°70'00"N, 119°14'00"E, 25.vii.1999, sweeping, Ji BC; 1♂, Zhejiang Province, Lishui City, Qingyuan County, Baishanzu, 27°73'23"N, 119°19'06"E, 13.vii.1995, light trap, Ji BC; 4♂♂, Zhejiang Province, Lishui City, Qingyuan County, Baishanzu National Nature Reserve, 27°73'23"N, 119°19'06"E, 24.vii.2012, light trap, Lin XL; 1♂, Zhejiang Province, Wenzhou City, Taishun County, Wuyanling National Nature Reserve, 27°71'15"N, 119°64'64"E, 3.viii.2005, light trap, Ji BC; 1♂, Zhejiang Province, Lishui City, Jingning County, 27°97'67"N, 119°63'12"E, 27.vii.2012, light trap, Lin XL.

**Diagnosis.** This species can be separated from other members of the group by the following combination of characters: R without seta; tergites I, II and anterior part of tergite V pale brown, tergites IV and VIII brown, anal point with 4–5 setae on each

**Table 5.** Differences in the Chinese and Indian specimens of *R. (P.) valgus*

	Chinese specimens	Indian specimens
Squama	5–8, 7 setae	9 setae (average)
HR	1.98–2.15, 2.08	2.20 (average)
HV	2.88–3.20, 3.03	3.40 (average)

side and 1 seta at the base; gonocoxite with a prominent triangular basal lobe bearing 3–4 setae.

**Remarks.** The Chinese specimens generally agree with the original description by Chaudhuri and Sinharay (1983), though some measured differences between the Chinese specimens and those of Chaudhuri and Sinharay (1983) are shown in Table 5.

**Distribution.** China (Guangdong, Guangxi, Hubei and Zhejiang Provinces), India.
