## Abstract

An updated checklist of the Atelestidae, Brachystomatidae, Dolichopodidae, Empididae and Hybotidae (Diptera) recorded from Finland is presented. The genera with uncertain placement within superfamily Empidoidea (= the *Iteaphila* group) are also included in this paper.

## Keywords

Checklist, Finland, Diptera, Atelestidae, Brachystomatidae, Dolichopodidae, Hybotidae, Empididae

## Introduction

Empidoidea (dance flies and long-legged flies) is one of the most diverse lineages of Diptera with some 13,000 species currently recognized worldwide (Pape et al. 2011) and many more still undescribed. The superfamily is generally accepted as monophyletic, but its subdivision into families, subfamilies and tribes is still being debated.

The families Atelestidae, Brachystomatidae, Hybotidae and Empididae were traditionally all included in Empididae *sensu lato*. Chvála (1983) split the empidids into five

**Table 1.** Number of species by family.

Family	Number of species in			Level of knowledge
	World (Pape et al. 2011)	Europe	Finland	
Atelestidae	11	4	2	average
Brachystomatidae	147	13	4	average
Dolichopodidae	7235	790	260	good
Hybotidae	1972	442	143–144	average
Empididae	3049	803	175	average

families: Empididae *sensu stricto*, Hybotidae, Atelestidae, Dolichopodidae and Microphoridae. Sinclair and Cumming (2006) analyzed the whole superfamily Empidoidea, elevated Brachystomatidae to a full family and transferred Microphorinae to the long-legged flies (Dolichopodidae). Two of the Finnish genera, *Anthevisorius* Becker and *Iteaphila* Zetterstedt, remain unassigned on family level (Sinclair and Cumming 2006, Shamshev and Sinclair 2009). The classification proposed by Sinclair and Cumming (2006) is adopted for this checklist.

The world fauna of the Empidoidea has recently been catalogued by Yang et al. (2006, 2007). The Finnish species were last listed by Kahanpää and Winqvist (2005) for Atelestidae, Brachystomatidae, Hybotidae and Empididae (plus Microphorinae) and by Kahanpää and Grichanov (2004) for Dolichopodidae. Two updates to the dolichopodid checklist have since been published (Kahanpää 2006, 2013).

## Checklist

suborder Brachycera Macquart, 1834

clade Eremoneura Lameere, 1906

superfamily Empidoidea Latreille, 1809

## Excluded species

- Chelifera astigma* Collin, 1927 misidentified
- Chrysotus arcticus* Frey, 1915 not found within present borders
- Chrysotus longipalpus* Aldrich, 1896 imported  
= *pallidipalpus* van Duzee, 1933
- Chrysotus ringdahli* Parent, 1929 not found within present borders
- Clinocera nigra* Meigen, 1804 misidentified
- Crossopalpus abditus* Kovalev, 1972 not found within present borders
- Dolichopus angustipennis* Kertesz, 1901 not found within present borders  
= *adustus* Frey, 1915
- Dolichopus grandicornis* Wahlberg, 1850 not found within present borders
- Dolichopus mediicornis* Verrall, 1875 not found within present borders
- Dolichopus plumitarsis* Fallén, 1823 misidentified
- Dolichopus propinquus* Zetterstedt, 1852 misidentified
- Drapetis incompleta* Collin, 1926 misidentified
- Empis punctata* Meigen, 1804 not found within present borders
- Gymnopternus assimilis* (Staeger, 1842) misidentified
- Hilara flavipes* Meigen, 1822 misidentified
- Hilara maura* (Fabricius, 1776) not found within present borders
- Hilara scrobiculata* Loew, 1873 misidentified
- Hilara tetragramma* Loew, 1873 misidentified
- Hydrophorus balticus* (Meigen, 1824) not found within present borders
- Hydrophorus ponojensis* Frey, 1915 not found within present borders
- Iteaphila furcata* (Zetterstedt, 1842) not found within present borders
- Medetera annulitarsus* von Roser, 1840 misidentified
- Medetera glauca* Loew, 1869 misidentified
- Medetera feminina* Negrobov, 1967 misidentified
- Medetera truncorum* Meigen, 1824 imported
- Oedalea flavipes* Zetterstedt, 1842 misidentified
- Parathalassius krogerusi* Frey, 1927 nomen nudum
- Rhamphomyia tibialis* Meigen, 1822 misidentified
- Rhaphium antennatum* (Carlier, 1835) misidentified
- Rhaphium obscuripes* Zetterstedt, 1849 misidentified
- Rhaphium suave* (Loew, 1859) not found within present borders
- Tachytrechus insignis* (Stannius, 1831) misidentified
- Trichoclinocera lapponica* (Ringdahl, 1933) not found within present borders

## Notes

***Dolichopus caligatus* Wahlberg, 1850** was synonymized with *D. flavipes* Stannius, 1831 by Becker (1918) but Collin (1940) reinstated *D. caligatus* as a valid species.

True *D. flavipes* (if it is a valid species) has not been found in Finland but some specimens have been recorded from Northwestern European Russia.

***Dolichopus stenhammari* Zetterstedt, 1843.** Zetterstedt (1838) first described this species as *Dolichopus annulipes*. Later he proposed *D. stenhammari* Zett., 1843 as an (unnecessary) replacement name for the taxon: *Porphyrops annulipes* Meigen, 1824 was recognized in *Dolichopus* at the time, but only as a junior synonym of what is now *Sympycnus pulicarius* (Fallén, 1823) (Zetterstedt 1843). Nonetheless this act means, according to article 59.3 of The Code (ICZN 1999), that *D. annulipes* Zett., 1838 is permanently invalid.

***Hilara pseudochorica* Strobl, 1892.** Erroneously deleted from the Finnish checklist by Kahanpää and Winqvist (2005).

***Iteaphila furcata* (Zetterstedt 1842).** Sinclair and Shamshev (2012) list a specimen from Kuusamo with code label 1546. According to R. Frey's notes this specimen was collected in 1917 from eastern Kuusamo, an area ceded to Russia in 1944.

***Neurigona* sp. A** is probably *N. uralensis* Becker, 1918.

***Platypalpus articulatus* and *P. maculimanus*.** According to Allen (1986) these two names are not synonymous and the species identified as *P. articulatus* Macquart by Chvála (1975, 1989) is in fact *P. maculimanus* (Zett.). Upon re-examination, all Finnish material previously identified as *P. articulatus* belonged to *P. maculimanus* and *P. articulatoides* Frey. It remains unclear whether the real *P. articulatus* occurs in Finland.

***Rhaphomyia* sp. nr. *albibennis*.** An apparently undescribed species near *R. albipennis* (Fallén, 1816) (K. Winqvist & M. Barták, priv. comm.).

***Sympycnus pulicarius* (Fallén, 1823).** Pollet (2004) (Fauna Europaea) treats *S. annulipes* (Meigen, 1824) and *S. desoutteri* Parent, 1925 as valid species and lists *S. pulicarius* (Fallén, 1823) as a synonym of the latter but notes that it might actually be a synonym of *S. annulipes*.

***Thrypticus* sp. A** is probably *T. incanus* Negrobov, 1967 described from the Leningrad Oblast, Russia (Negrobov 1967).

***Trichoclinocera lapponica* (Ringdahl, 1933).** The type locality of this species, "Lappland nära Tjuonajaure", (Ringdahl 1933) is in Sweden, not Finland as stated in Chvála and Wagner (1989).
