This book provides an annotated checklist of all the eukaryotic parasites (exclusive of fungi and algae) that have been documented from the human host, including protozoans, helminths, leeches, and arthropods. In total, 274 genus-group taxa and 848 species-group taxa are provided. For each relevant taxon, the geographic distribution, natural hosts, route of transmission, site in the human host, and vectored pathogens are summarized. In addition, 79 taxa previously reported has human parasites are excluded but listed and briefly discussed. The goal is to provide a taxonomic and nomenclatural reference for medical parasitologists, medical technologists, and other professionals who encounter human parasites as part of their work or interest.
ZooKeys is a peer-reviewed, open-access, rapidly disseminated journal launched to accelerate research and free information exchange in taxonomy, phylogeny, biogeography and evolution of animals. ZooKeys aims to apply the latest trends and methodologies in publishing and preservation of digital materials to meet the highest possible standards of the cybertaxonomy era.

ZooKeys will publish papers in systematic zoology containing taxonomic/ faunistic data on any taxon of any geological age from any part of the world with no limit to manuscript size. ZooKeys will consider for publishing works on the following topics:
- new descriptions of taxa, if they are accomplished with proper diagnoses, keys and/or revision of at least at species group level
- taxonomic revisions of extant (or 'recent') and fossil animal groups
- checklists and catalogues
- phylogenetic and evolutionary analyses
- papers in descriptive and/or historical biogeography
- methodology papers
- data mining and literature surveys
- monographs, conspecti, atlases
- collections of papers, Festschrift volumes, conference proceedings

Papers containing identification keys will be accepted with priority. Extensive manuscripts consisting mostly of keys will be considered for publishing as well.
